

### **Proposed Amendment No. 3**

#### **Would Update the language describing the Aquifer Protection District, and Expand the district to include wellhead protection areas.**

The first paragraph of Section 1004 as it now reads (would become Section 603.2 with passage of Amendment No. 1):

The Aquifer Protection District is an overlay district which is superimposed over the existing underlying zoning districts and it imposes additional requirements and restrictions to those of the underlying, base district zoning. In all cases, the more restrictive requirement(s) and permitted uses shall apply. The boundaries of the Aquifer Protection District shall be the contact of sand and/or gravel deposits with other geologic deposits or boundary conditions within the subsurface, initially mapped as the boundary of the stratified-drift aquifer on Carroll Drinking Water Resources Map dated October 21, 2004, by the New Hampshire Department of Environmental Services.

The first paragraph of Section 1004 as it would read with passage of Amendment No. 3 (would become Section 603.2 with passage of Amendment No. 1):

The Aquifer Protection District is an overlay district which is superimposed over the existing underlying zoning districts and it imposes additional requirements and restrictions to those of the underlying, base district zoning. In all cases, the more restrictive requirement(s) and permitted uses shall apply. The Aquifer Protection District shall include the wellhead protection areas shown on the latest mapping available from NHDES, and the areas shown as stratified-drift aquifers on the latest mapping available from US Geological Survey and/or the New Hampshire Department of Environmental Services.

Amendment No. 3 would add the following definition to Section 202 Definitions:

Wellhead protection area: the surface and subsurface area surrounding a water well or wellfield supplying a community public water system, through which contaminants are reasonably likely to move toward and reach such water well or wellfield.
